

YouTube Dataset Analysis in Power BI – One Page Project Summary

Objective: Analyze YouTube engagement metrics and video attributes to identify trends, viewer behavior, and content performance, enabling creators and marketers to optimize strategy.

Tasks to Perform

1. Display Maximum Uploads using a Card Visual.
2. Display Minimum View Rank using a Card Visual.
3. Display Average Views (Last 30 Days) using a Card Visual after data cleansing.
4. Create a Line Chart showing Title vs Maximum Uploads for channels exceeding 200,000 uploads.
5. Use a Radar (Spider) Chart to visualize Channel Type and Channel Rank.
6. Create a Packed Bubble Chart for Category-wise Subscribers.
7. Create Calculated Column:
Viewed by Subscriber = Views / Subscribers
8. Create a Table Visual showing Channel Type and Viewed by Subscriber.
9. Create Measure:
Total Uploads = SUM(Uploads)
Display it in a Card Visual.
10. Create a Decomposition Tree to analyze Rank-wise Categories.

Expected Outcome: Identification of high-performing channels, category trends, subscriber engagement patterns, and actionable recommendations for content optimization.
